IELG/Baby TALK Curriculum Crosswalk

Self-Regulation

Physiological Regulation

Physiological Regulation, Children demonstrate the emerging ability to regulate their physical processes in order to meet both their internal
needs and external demands in accordance with social and cultural contexts.

0-9 months

Children's biological rhythms are supported and impacted by their caregiver(s) in order to establish their sleep/wake, feeding, and elimination patterns. Children also begin to develop awareness of stimuli in their environment.

Self-Regulation

Physiological Regulation

Physiological Regulation, Children demonstrate the emerging ability to regulate their physical processes in order to meet both their internal
needs and external demands in accordance with social and cultural contexts.

7-18 months

Children, through support of their caregiver(s), become increasingly organized in and begin to adapt their sleep/wake, feeding, and elimination patterns. Children are also beginning to organize and habituate to stimuli in their environment.

Self-Regulation

Physiological Regulation

Physiological Regulation, Children demonstrate the emerging ability to regulate their physical processes in order to meet both their internal
needs and external demands in accordance with social and cultural contexts.

16-24 months

Children have established patterns in sleep/wake, feeding, and elimination functions. Children use nonverbal and verbal communication to signal needs for support in regulating. They begin to manage internal and external stimuli.

Self-Regulation

Physiological Regulation

Physiological Regulation, Children demonstrate the emerging ability to regulate their physical processes in order to meet both their internal
needs and external demands in accordance with social and cultural contexts.

21-36 months

Children begin to independently manage functions of feeding, sleeping, waking, and eliminating with some support from their caregiver(s). Children can now manage and begin to discriminate internal and external stimuli.

Self-Regulation

Attention Regulation

Attention Regulation, Children demonstrate the emerging ability to process stimuli, focus and sustain attention, and maintain engagement in accordance with social and cultural contexts.

21-36 months

Children begin to attend to, engage in, & transition between multiple activities at a time. They also have an increased internal capacity to discriminate & strategize while focusing & attending, & can remain focused for longer periods of time.

Self-Regulation

Behavior Regulation

Behavior Regulation, Children demonstrate the emerging ability to manage and adjust behaviors in accordance with social and cultural contexts.

7-18 months

The use of social referencing emerges and supports children in developing an internal capacity to modify some of their behaviors. Children still depend heavily on the use of their caregiver to help co-regulate their behaviors.

Social & Emotional Development

Attachment Relationships	Attachment Relationships, Children form secure attachment relationships with caregivers who are emotionally available, responsive, and consistent in meeting their needs.

21-36 months

Children demonstrate a desire for their attachment figure to share in their feelings, responses, and experiences. Behaviors that demonstrate a need for physical proximity with the primary caregiver decrease, while in certain instances of distress, some children seek to be close to their attachment figure.

Social & Emotional Development

Empathy

Empathy, Children demonstrate an emerging ability to understand someone else's feelings and to share in the emotional experiences of others.

0-9 months

Children begin to build awareness of others' feelings by observing and reacting to sounds that others make. Toward the end of this age period, infants understand that they are individuals and separate from their caregiver(s) , a crucial milestone in interpreting the feelings of others.

Language Development, Communication, & Literacy

Expressive Communication

Expressive Communication, Children demonstrate the ability to understand and convey thoughts through both nonverbal and verbal expression.

7-18 months

Children's language progresses from babbling to utterances and to first words. Toward the end of this age period, babbling decreases as children begin to build their vocabulary.

Symbolic Thought

Symbolic Thought, Children demonstrate the understanding of concepts, experiences, and ideas through symbolic representation.

7-18 months

Children use social interaction to continue to gather meaning from objects, actions, and people. Children move from exploring objects to learning how to play with objects in ways they are intended to be used. Toward the end of this age period, children begin to use one object to represent another object.

Cognitive Development

Safety & Well-Being

Safety & Well-Being, Children demonstrate the emerging ability to recognize risky situations and respond accordingly.

0-9 months

Children first rely on their natural reflexes to signal basic survival needs to their caregiver(s). Toward the end of this age period, an emerging awareness in their own bodies and trust in their caregiver(s) support children in meeting needs and protecting them in uncertain and potentially unsafe situations.

Cognitive Development

Safety & Well-Being

Safety & Well-Being, Children demonstrate the emerging ability to recognize risky situations and respond accordingly.

16-24 months

Children begin to build a basic understanding of their physical limits and unsafe situations. Children are still motivated to interact and explore the environment with little regard to risks, and continue to rely on caregiver(s) to help manage their impulses.

Cognitive Development

Safety & Well-Being

Safety & Well-Being, Children demonstrate the emerging ability to recognize risky situations and respond accordingly.

21-36 months

Children will begin to demonstrate a limited ability to internalize what caregiver(s) communicates in relation to safety, rules, and well-being. Children continue to act upon impulses but begin to develop strategies to protect themselves in uncertain and potentially unsafe situations.

Approaches to Learning

Persistence, Effort & Attentiveness

Persistence, Effort & Attentiveness, Children demonstrate the ability to remain engaged in experiences and develop a sense of purpose and follow-through.

7-18 months

Children begin to become more persistent in interacting with people, exploring objects, and accomplishing tasks. While their ability to sustain attention increases, they are still easily distracted by other objects and events in the environment.

Approaches to Learning

Persistence, Effort & Attentiveness

Persistence, Effort & Attentiveness, Children demonstrate the ability to remain engaged in experiences and develop a sense of purpose and follow-through.

16-24 months

Children increase their ability to remain focused on goal-oriented tasks. At this stage, persistence is evidenced by the process the child engages in to discover how to accomplish the goal, instead of by the end result.

Approaches to Learning

Persistence, Effort & Attentiveness

Persistence, Effort & Attentiveness, Children demonstrate the ability to remain engaged in experiences and develop a sense of purpose and follow-through.

21-36 months

Children attend to tasks for longer periods of time with more abilities to persist in increasingly difficult tasks. They can now attend to more than one event in their environment; this enables them to stay focused even with distractions.
