

# The Project Approach: Children Taking Surveys

*Surveys are popular sources of information for adults. Young children can also use simple surveys. They can ask others for predictions related to a project or ask about others' opinions, experiences, and work. Here are some teacher-tested suggestions for helping preschoolers conduct surveys.*

## **Demonstrate ways to construct and take surveys.**

- Let the children watch you making a survey form with a question that has two possible answers (“Yes/No”; “Agree/Disagree”). During a project on a dentist’s office, for example, you might pose the question, “Have you been to a dentist?” Attach your survey to a clipboard and go to the children one by one to ask the question. Show how to choose a column and make the check mark for a response.
- When you have surveyed all the children, report the findings to the class. Show them how to compare the two response columns. “You counted eight checks in the ‘Yes’ column and four in the ‘No’ column. That means eight people said they have been to a dentist and four said they have not.”

## **Help children to take their own surveys.**

- Encourage them to work in pairs, or groups of three or four.
- Talk with them about what they want to find out, and help them decide how to phrase the survey question. With experience, they may be able to create surveys with more than two possible responses.
- Help them decide whom to survey. Will the survey be for classmates, families, or someone else?
- Add blank two-column survey forms to the writing area. The teacher can help the children write their question and the children can illustrate their survey by drawing pictures of the two options (e.g., “Do you like ice cream or pizza?”).

## **Let children take surveys during any phase of project work.**

- In Phase 1, help children focus surveys on people’s opinions and experiences. Their questions might include, “Do you like the flavor of the toothpaste at the dentist?” “Did you ever lose a tooth?”
- Encourage children to use surveys in Phase 2 to gather predictions related to the investigation, or to enhance fieldwork. They might ask questions such as, “Do you think we will see toothbrushes when we visit the dentist?” On the site visit, they might get permission to ask patients, “Is the dentist chair comfortable?”
- In Phase 3, let children survey classmates to choose ways the class might represent project findings. “Do you think we should make a model of the dentist’s chair or a mural of the office?” Phase 3 questions might also be reflective. “Do you think you might want to be a dentist someday?”

## **Make surveys a regular part of classroom life.**

- Create survey templates to keep on hand and have clipboards and pencils available. (Make inexpensive clipboards using stiff cardboard and paper clips.)
- Set aside time during class meetings for children to report on their survey findings.
